

THE PLAY SEQUENCE

- Spells are quick-play (instant speed cards) and can be played during any phase on either player's turn.

DRAW PHASE

- Beginning of draw phase effects are enacted.
- The active player draws one card from their deck.
- End of draw phase effects are enacted.

INCOME PHASE

- Beginning of income phase effects are enacted.
- Friends with burn counters on them take one instance of 1 damage for each burn counter placed on them.
- All cards controlled by the active player with an 'income' ability generate the amount listed.
- In the event that the order in which cards generate income would be important, the active player chooses the order in which their cards generate income.
- Any card that would generate income while it has one or more freeze counters on it removes one freeze counter instead.
- End of income phase effects are enacted.

MAIN PHASE 1

- Beginning of main phase effects are enacted.
- The active player can play friend, sponsor, and item cards, and use activated abilities.
- End of main phase effects are enacted.

COMBAT PHASE

- Beginning of combat phase effects are enacted.
- The active player can declare attacks with their friends.
- End of combat phase effects are enacted.

MAIN PHASE 2

- Same as main phase 1

END PHASE

- Beginning of end phase effects are enacted.
- All friends controlled by the active player with one or more stun counters placed on them remove one stun counter.
- End of end phase effects are enacted.

UNIVERSAL COUNTERS

INCOME COUNTERS

Whenever a card with an 'income' ability would generate money, it generates an additional amount of money equal to the number of income counters placed on that card.

NOTE: income counters DO NOT increase a card's actual income. Any rules that reference a card's income exclude any income counters placed on that card.

POWERUP COUNTERS

Whenever a friend deals damage, the amount of damage that they deal is increased by the number of powerup counters placed on them.

ARMOR COUNTERS

Whenever a friend would take damage, their controller can choose to remove an armor counter from them in order to negate that instance of damage.

REFLECT COUNTERS

Whenever a friend with reflect counters on them takes damage, the amount of damage they take is lowered by the number of reflect counters on them. The amount of negated damage is then dealt to a new target as a new instance of damage. This damage is sometimes referred to as 'reflect damage'.

When choosing a target for reflect damage:

- If the damage was dealt by an attack (i.e. the damage is combat damage), the target of the reflect damage must be the source of that combat damage.
- If the damage was dealt by another source (i.e. non-combat damage), the target of the reflect damage is chosen by the controller of the card with reflect counters on it.

BURN COUNTERS

After the beginning of the active player's income phase, each friend they control with one or more burn counters on them takes 1 damage for each burn counter on them.

NOTE: each burn counter inflicts a separate instance of damage.

STUN COUNTERS

Friends with one or more stun counters on them cannot use activated abilities or attacks.

At the beginning of the active player's end step, they remove one stun counter from each friend they control with one or more stun counters on them.

FREEZE COUNTERS

Whenever a sponsor with one or more freeze counters on it would generate income, a freeze counter is removed from that sponsor instead.

DEGENERACY COUNTERS

Whenever a sponsor with one or more degeneracy counters on it would generate income, the income it would generate is lowered by the number of degeneracy counters on it.

KEYWORDS

BADASS ARMOR

If a friend wielding an item with 'Badass Armor' would receive any amount of combat damage, that damage is dealt to that item instead.

If an attack deals an amount of combat damage that destroys the item with Badass Armor, any excess damage is dealt to the friend that was wielding that item.

Unless stated otherwise, a friend cannot be equipped with more than one item that has 'Badass armor'. If a friend would be equipped with more than one Badass Armor item, that friend's controller must choose a number of Badass Armor items to destroy so that the friend is equipped with only one Badass Armor item.

PAWN

While a player controls one or more friends with the 'Pawn' keyword, whenever their opponent declares an attack with one of their friends, that attack must be declared against one of the friends with the 'Pawn' keyword.

1 – CARD NAME

This is the name of the card being played. Some card rules will call on other cards by name, and many more cards will reference themselves by name, written in all capital letters and underlined.

2 – TYPE AND COLOR

Listed here is the card's type and color. The type is always listed first and the color is always listed second. A card's color can also be determined at a glance by the literal color of the card (i.e. chartreuse cards are green, falun cards are red, etc).

3 – BASE HP

This value is the amount of HP that the card enters the battlefield with. Some cards, such as spells or items, do not have HP values, as they cannot be destroyed by damage.

4 – PLAY COST

This value is the amount of \$ that must be spent in order to play a card. All cards have a play cost. In the case of cards that can be played for free by default, they will have a play cost of \$0.

5 – CARD RULES

This area is reserved entirely for a card's rules. These are the instructions for how a card is played and how it affects the game. In any case where card rules would conflict with the core rules of the game, card rules always trump core rules.

6 – FLAVOR TEXT

Some cards have flavor text that provide insight into the lore of the card and the wider world it inhabits. Or it could just be some bullshit. In either case, flavor text is always written in italics below the card rules, and has no bearing on the actual rules of the card.

UNDERSTANDING CARD TYPES

Currently, the NSAF TCG contains four major card types: Friends, Sponsors, Items, and Spells.

Certain special rules apply to cards depending on their type, which is explored more in the SEQUENCE OF PLAY section of the rulebook.

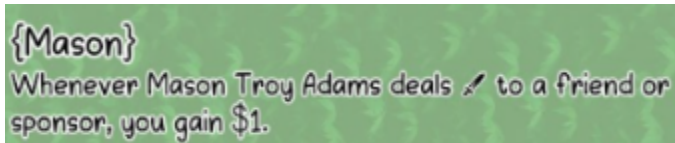

FRIENDS: UNDERSTANDING ATTACKS AND ABILITIES

The majority of card rules for friends (as well as some sponsors, items, and spells) are conveyed using attacks and abilities. Attacks and abilities are normally indicated via a name surrounded by different types of brackets, with the rules for those attacks and abilities listed underneath their respective names.

ANATOMY OF A CARD

PASSIVE ABILITIES

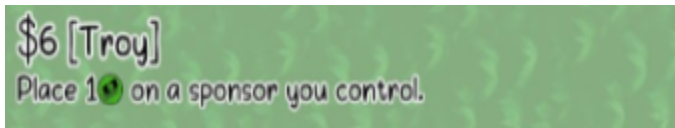

{Mason}
Whenever Mason Troy Adams deals ✂ to a friend or sponsor, you gain \$1.

Passive abilities are indicated using {} brackets. These abilities are rules that are always active. Unless stated otherwise by the ability, passive abilities are only active while the friend is on the battlefield.

Some passive abilities only trigger when a certain event occurs or a set of other conditions are met. These abilities are appropriately called 'Triggered Abilities'. Triggered abilities can be identified by the use of words like 'when', 'whenever', or 'at', usually found at the beginning of the ability's rules text. The ability shown above is an example of a triggered ability.

NOTE: all triggered abilities are passive abilities, but not all passive abilities are triggered abilities.

ACTIVATED ABILITIES

\$6 [Troy]
Place 1 🍷 on a sponsor you control.

Activated abilities are indicated using [] brackets. Activated abilities must be used, or 'Activated', by spending money equal to the amount shown to the left of the ability name.

An activated ability, unless stated otherwise by a card, can only be used once during the controlling player's turn. The rules for using activated abilities are explained further in the SEQUENCE OF PLAY section of the rulebook.

Some activated abilities are considered Secondary Activated Abilities. These are activated abilities that still present an activation cost (spend \$X, Sacrifice X, etc), but do not possess the usual bracketed ability name. Secondary activated abilities can only be activated during the main phase, but there is no limit to the number of times a Secondary Activated Ability

ATTACKS

\$3 <Adams> 1d8 ✂

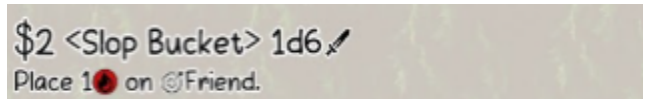

Attacks are indicated using <> brackets. Much like activated abilities, attacks must be used, or 'Declared', by spending money equal to the amount shown to the left of the attack name.

The base damage dealt by an attack is shown to the right of the attack name.

\$2 <Butter> 2 ✂ 1 🍷

Some attacks also include counter symbols next to their name as well as their base damage. For attacks such as this, the number of each counter (listed to the left of the counter symbol) is placed on the attack's target.

\$2 <Slop Bucket> 1d6 ✂
Place 1 🍷 on 🍷 Friend.

Attacks may also include additional rules, similar to the attack shown above. These additional rules are the 'Secondary Effects' of the attack.
